

Act to protect the Gardens of Stone from open-cut mining

What legacy do we want for future generations?

This is a very important campaign that will affect future generations. Please give your support by signing our petition to protect this very special area of the Gardens of Stone.

Did you know that open cut mining in state forests and national parks undermines the areas biodiversity and causes a severe loss of birdlife and wildlife habitat.

If the proposal to open cut mine is approved, the equivalent of 2,176 football fields of predominantly old growth forest (an irreplaceable carbon sink) will be clear-felled and laid waste so as to open-cut the underlying coal.

Would you give the green light to mining companies to desecrate your garden and property by allowing them to dig a HUGE hole in your backyard?

Trekfa Adventure has always had a close association and alliance with the Nature Conservation Council of NSW. Please assist by signing the petition.

The forest is home to stunning rock formations, hundreds of native plants and wondrous slot canyons. The Gardens of Stone is under imminent threat due to a consolidation proposal by Coalpac Pty. Ltd. to extend open-cut and high-wall mining into a large area of publicly owned land. Environment groups are outraged at this proposal.

If approved, these unique Gardens of Stone, wildlife habitats and natural heritage will be lost forever.

Does doing nothing mean that we're saying it's OK???
